LUXE & THREAD · DOCUMENTATION

INTERNAL – for developers

Internal 08 · Post-Deployment Health Check (HC) Guide

Audience	INTERNAL – whoever deploys
When	after every deployment (full list) · every morning (daily list) · after any incident
Time	full: ~20 min · daily: ~5 min

A · Immediately after deploy (full check)

#	Check	Command / action	Pass criteria
1	Process running	`pm2 status`	`luxe-thread` **online**, restarts = 0–1
2	Health endpoint	`curl -s https://www.your-domain.in/api/health | python3 -m json.tool`	`status:"ok"`, `database:true`, razorpay/shiprocket/email `true` as configured
3	HTTPS	`curl -sI https://www.your-domain.in | head -1` and `curl -sI http://www.your-domain.in | head -2`	`200`; http redirects to https
4	Certificate	`echo | openssl s_client -connect www.your-domain.in:443 2>/dev/null | openssl x509 -noout -dates`	expires > 14 days
5	Logs clean	`pm2 logs luxe-thread --lines 100 --nostream | grep '"level":"error"'`	no new errors
6	Migrations applied	`psql "$DATABASE_URL" -c "select version from schema_migrations"`	latest file listed
7	Home, shop, a product, size guide load	open in browser (desktop + phone)	no errors, photos visible
8	Product data	shop shows expected products/stock	counts match admin
9	Sitemap/robots	`/sitemap.xml`, `/robots.txt`	products listed, `/admin` disallowed
10	Admin login	`/admin/login`	dashboard opens, numbers sensible
11	Background jobs	`curl -i -X POST -H "x-jobs-secret: $JOBS_SECRET" https://host/api/jobs/notifications`	`200 {"sent":…}`
12	Cron present	`crontab -l`	notifications (1 min), expire-orders (5 min), backup (daily)
13	Uploads	open a product photo URL `/media/<file>`	`200` image
14	Webhooks reachable	Razorpay & Shiprocket webhook test (Config guide §5.2/5.4)	200

#	Check	Command / action	Pass criteria
15	Test order (prepaid)	place order with test card (staging) or small real order (live)	PAID, e-mail received, shipment created
16	Cancel flow	cancel that test order from the order page	CANCELLED, stock restored, refund (if paid)
17	Backup	run backup script manually; list file	file > 0 bytes, `pg_restore --list` ok
18	Disk / memory	`df -h /` and `free -m`	disk < 80 %, free memory > 200 MB
19	Security headers	`curl -sI https://host | grep -iE "x-frame|x-content|strict-transport|content-security"`	all present
20	Sign-off	write date, version/tag, checker name in the release log	☐

B · Daily check (5 minutes)

#	Check	Pass
1	`/api/health` ok	database true
2	Admin Dashboard: "Orders to ship", "Return requests", "Messages failed"	zero stuck items; act on any
3	`pm2 status` restarts count unchanged	✔
4	Yesterday's backup exists	file dated today
5	Razorpay captured vs our CAPTURED (Payments guide §6)	match
6	Errors: `grep '"level":"error"'` last 24 h	none repeating

C · Weekly

Shiprocket wallet balance · Messages tab: failed = 0 · low-stock list · disk space · `sudo apt list --upgradable` · review audit log for unexpected admin actions.

D · Monthly

Restore drill (Internal 10) · `npm audit` · apply OS updates · rotate nothing unless needed, but confirm secrets storage · delete old `notifications` (Database doc §8) · SSL renewal dry-run `sudo certbot renew --dry-run`.

E · Result template

Date	Version	Checked by	Items failed	Action	Re-test OK
